

Workshop Requirements

This is an advanced workshop. **You need to be comfortable doing the following:**

- Collecting raw EEG and generating a qEEG brain map
- Editing raw EEG
- Creating a client folder in BrainAvatar and importing a settings file
- Placing electrodes or an EEG cap on a client and running a session

There will be some intermittent tech support available, but we will not be teaching these introductory skills, and we will not be taking time to bring you up to speed at the expense of our attendees who have signed up to learn more complex skills.

If you wish to attend this workshop and you are uncertain if you have mastered these requirements, you will be responsible for contacting BrainMaster tech support prior to arriving if you have any questions or concerns about your competencies. They will be happy to review the required skills with you.

You Need to Bring

- Your Discovery amplifier and USB cable, as we will do some editing and you will need your amplifier plugged in to save edited files.
- Your laptop with all of your BrainAvatar software.

- You do not need to bring all of your electrodes and caps and goops and gels, as the practicums will be focused on learning new software and protocol development skills, but you are welcome to bring your prep and supplies if you would like to practice in the evenings with other attendees.

- Temporary software keys with all of the BrainAvatar features reviewed in the workshop will be provided to attendees. Please make sure your laptop is up to date and running the most recent version of BrainAvatar. **YOU ARE RESPONSIBLE FOR CONTACTING BRAINMASTER TECH SUPPORT AND HAVING THEM VERIFY YOUR MACHINE IS UP TO SPEC PRIOR TO ARRIVING AT THE WORKSHOP.**
